

Taking part in the Second Home Program セカンドホームに参加して

ANN-NARA LALITSA
Faculty of Education (Thailand)

I participated in the Second Home program as I wanted to learn Japanese from my host family.

Another purpose was to share my culture and customs with Japanese people who did not know much about my country (Thailand).

I like this program, as it gives me opportunities to use both English and Japanese languages.

I love to visit my host family house. I enjoyed having a dinner with them and playing games with their son there.

I belong to Department of Education.

My main purpose of staying in Mie U is to learn Japanese.

I will graduate from my university and work with family.

ANN-NARA LALITSA

セカンドホームに参加してホストファミリーから日本を学ぶことができました。

また、タイの文化や習慣をみなさんと共有できました。

日本ではタイについて、あまり知られていません。ホームステイに参加することで、日本語と英語を使う機会ができました。

ホストファミリーと一緒にゲームをしたり夕食をともにするなど、とても楽しかったです。

教育学部 修了後は、家族と一緒に働くつもりです。

Attending the meeting with president

学長会談に参加して

Nadia Istiqomah
Graduate School of Bioresources (Indonesia)

I welcomed the president's of Padjadjaran University and the staff. We had lunch together with Padjadjaran University's students who are studying in Mie Univ and have a walk around Mie University, introduce them about Campus Life. In the afternoon, me and some students have a chance to attend the meeting between Padjadjaran University's representatives and Mie University's.

Deepen relationship between these two Universities could provide great benefits for both. Joint research and knowledge transfer between universities, furthermore between Indonesia-Japan, may enrich the knowledge and may contribute to the world for sure. This exchange could affect not only from knowledge point of view, but also attitude and characters of the student through culture learning.

Since the human population increasing year by year, especially in my country, they produce waste inevitably and polluted the environment. Chemical substance comes from human activities that release to the environment could threat other creatures live in the water. Moreover, the high dependence of plastic by human also induce environmental pollution, especially in the water. Hope my research could have a contribution to environmental problem.

Nadia Istiqomah

パジャジャラン大学のTri新学長が三重大学を訪問した日は、昼食を一緒にとり、キャンパスの案内をしました。

午後は、学長たちの会談に参加し学長に挨拶をしました。お互いに知識や研究交流を通して、世界に貢献できると思います。お互いの文化を学ぶことで、知識だけでなく、教養も身につくと思います。

近年、人口増加で環境汚染が増えています。私の国でも環境問題は深刻です。プラスチックへの依存がさらに環境問題を引き起こしています。私の研究が、環境汚染を減らすことに貢献できればと考えます。
